EDUCATION

University of Florida

Gainesville, FL

Bachelor of Science in Computer Science

Aug. 2024 – May 2028

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Software Engineering

EXPERIENCE

Clubfinity - UF Software Engineer Club

Gainesville, FL

Software Developer

Sept 2025 – Present

- Collaborated with a 15-member team to build an internal MERN platform managing workshops and resources for 150+ members.
- Developed RESTful APIs for workshop data and implemented secure bcrypt-based authentication for session protection.
- Engineered a modular backend structure, isolating API routing, business logic, and data persistence to ensure long-term scalability and code maintainability.

Courselynx

Remote

Mobile Developer

Feb 2025 – June 2025

- Built a real-time academic chat application using React Native and TypeScript, enabling smooth media sharing for students.
- Collaborated with the UI/UX team via Figma and utilized Expo Go for rapid iteration and on-device testing.
- Optimized image loading with React Native Fast Image, boosting user engagement by 20%.

PROJECTS

GameMate | *Java, Spring Boot, React, Next.js, PostgreSQL*

- Architected a full-stack gamer matchmaking platform that connects users based on shared games and playstyles.
- Optimized a PostgreSQL database of 10,000+ records for user profiles and chat data, improving query speed and reliability.
- Handled 100+ concurrent requests with a scalable Spring Boot backend, secured via JWT authentication and Bcrypt password encryption.
- Built a responsive frontend with Next.js and Tailwind CSS, achieving sub-second page load times through server-side rendering and optimized data fetching.

BrushUp | *PyTorch, Hugging Face, Flask, SQLAlchemy, React*

- Created a Generative AI drawing app that produces custom art references utilizing Latent Diffusion Models and Transformers.
- Designed and managed a relational SQLite database with 1,000+ records using SQLAlchemy and Flask-Migrate, reducing asset retrieval time by 40%.
- Engineered a low-latency AI pipeline using Hugging Face tools, leveraging Accelerate to optimize Stable Diffusion performance on Apple M1 GPUs, achieving an 80% reduction in generation time for near real-time output.

TECHNICAL SKILLS

Languages: Java, Python, C++, TypeScript, JavaScript, SQL, HTML, CSS, MATLAB

Frameworks & Libraries: Spring Boot, Flask, FastAPI, React, React Native, Next.js, Node.js, Express.js, PyTorch, Tailwind CSS

Tools & Platforms: PostgreSQL, Firebase, GCP, AWS, Git, Docker, MongoDB

Other: Bilingual in English and French

INVOLVEMENT

Software Engineer Club | *Workshop Lead*

Aug 2024 – Present

- Delivered workshops on Splunk and on FastAPI with Gemini AI function-calling integration to 50+ members.
- Coordinated technical events with club officers to increase member participation.
- Oversaw a LeetCode tournament with a \$1,000 prize, ensuring a fair and competitive environment for participants.
